Student Setu: final demo video script (your PDF + Skill Bridge + Teacher Copilot)

Demo video: `Student_Setu_Demo_Final_3m45.mp4` (3:45, 1080p, no sound).

A = you (Team Lead) · **B** = your friend. Replace [ ] with your details.

Part	What	Length
1	Team intro & problem (camera)	0:55
2–4	Website demo (this video + voiceover)	3:45
5	Conclusion (camera)	0:13
	Full video	**≈ 4:53** (under the 5-minute limit)

⏱️ Your PDF's Part 1 was 1:10. The demo is now 20 seconds longer, so I shortened Part 1 to 55 seconds, keeping the same message. Otherwise the full video would go over 5 minutes.

PART 1 · Team intro & problem (camera, 0:00–0:55) · A

0:00–0:18

> "Hello distinguished judges! We are Team **[Team Name]**, in the Hack for Social Cause track at the Viksit Bharat Young Leaders Dialogue. I am **[Your Name]**, the Team Lead, and with me is **[Friend's Name]**. We built **Student Setu**: one free ecosystem from study to job."

0:18–0:55

> "To realise Viksit Bharat 2047, our youth must be job-ready. Yet almost half of India's graduates are not, and students in small towns waste months on scattered, unverified websites just to understand their career options. Students who move to new cities struggle with food, shelter and new teaching styles. And when an exam like NEET doesn't clear, the lack of alternatives and isolated stress can lead to lost years, and sometimes tragedy. Our youth don't lack potential; they lack a bridge. That bridge is Student Setu."

PARTS 2–4 · Demo voiceover (video 0:00–3:45)

① 0:00–0:25 · B · School students

Screen: home → "Where are you today?" → Login → School student → Class 12 subjects → MBBS → NEET roadmap, notes & videos

> "Student Setu is free for three groups: school students, college students and graduates. A school student logs in and picks their Class 12 subjects. Instantly, they see every public and private course open

> to them, like MBBS, with the entrance exam, a step-by-step preparation roadmap, and free notes and video lectures."

② 0:25–1:07 · A · Skill Bridge (college students)

Screen: Gap Map (26% by graduation) → rate a skill → readiness rises → weekly plan (90 min) → HTML & CSS test → "Badge earned" → "Genuine" verify page

> "For college students, Skill Bridge compares their real university syllabus with what jobs actually need. This RGPV B.Tech syllabus covers only twenty-six percent of a web developer's skills, even by graduation. As the student rates what they already know, their job-readiness rises live, and they get a week-by-week plan from free courses that fits their daily time. To prove a skill, they take a short test, graded on our server so nobody can cheat, and earn a Verified Skill Badge that any employer can check in one click."

③ 1:07–1:31 · B · Skills Hub & matched jobs

Screen: AI Skill Courses → AI Prompt Lab (score 100) → leaderboard "Next step" → Careers: update profile → jobs matched

> "In the Skills Hub, students take the best free AI courses and practise hands-on in our AI Prompt Lab. A personal leaderboard shows the exact next step to a job. And once they graduate, they update their profile, and Student Setu filters out the noise to show only jobs matched to their degree and skills."

④ 1:31–2:17 · B · Teacher Copilot

Screen 1:31–1:53: demo teacher (Verified) → lesson planner → lesson plan → quiz → assign → class code Screen 1:53–2:07: student's phone joins with the code → quiz → instant score Screen 2:07–2:17: class of 26 → weak-topic heatmap → re-teach

> "Teachers in government and local colleges get Teacher Copilot. A verified teacher picks a syllabus subject, types today's topic, and in one click gets a complete lesson plan, then turns it into a quiz with answers and explanations. She assigns it and shares a six-letter class code on WhatsApp. *(1:53)* On a phone, students just type the code. No login, no app. And the quiz is graded instantly. *(2:07)* Back on the teacher's screen, the weak-topic heatmap shows only thirty-one percent understood Normalization, so one click plans a re-teach lesson."

⑤ 2:17–2:38 · B · Stay, food & study material

Screen: map of colleges, hostels and tiffin centres → Study Resources → RGPV → DBMS → PYQs

> "Students moving to a new city see verified hostels and home-style tiffin centres around their college on one map: affordable food that also supports women-run home kitchens. And notes, previous-year papers and syllabus are organised university-wise, free to download."

⑥ 2:38–3:09 · A · SIDF

Screen: events in government colleges → mentors → Smart India Hackathon → government funding schemes → idea form → instant feedback

> "Government and tier-3 colleges have no incubation centres, so we built SIDF, the Student Innovation and Development Forum, right inside Student Setu, with no external registration. Students join startup

> events in their own colleges, get mentor guidance, prepare for national hackathons, and find government funding like the Startup India Seed Fund. They can even submit an idea and get instant feedback."

⑦ 3:09–3:32 · A · Counseling & alternative careers

Screen: stress-support banner → NEET alternatives → Talk to an Expert booking

> "And Student Setu protects students from burnout. If a student misses the NEET cut-off, they instantly see strong alternative careers like physiotherapy, nursing and lab technology. They can talk to an expert, and for urgent support, the government's free Tele-MANAS helpline, 14416."

⑧ 3:32–3:45 · B · Tech stack

Screen: architecture page → "Try it live"

> "Our stack scales: a React progressive web app for slow networks, serverless Netlify Functions, Google Gemini AI and Netlify Blobs, built to grow across India."

PART 5 · Conclusion (camera, 13 s) · A, then both

> **A:** "From school to college, and from college to a secure job, Student Setu guides youth at every step, free of cost. Thank you!" **Both:** "Let's bridge the gap together, with Student Setu!" 🙏

Speaking time

- **A (you):** Part 1, ②, ⑥, ⑦ and Part 5.
- **B (friend):** ①, ③, ④, ⑤ and ⑧.

Notes

- **Section ④:** the lesson plan and quiz in this recording come from the site's built-in templates. My workspace can't reach Gemini, so the line says "Copilot builds", not "Gemini wrote". On your live site, real Gemini AI generates them.
- **What I changed from your PDF:** a few claims, so everything you say is true:
  - no "university partnerships";
  - no "onboarded counsellors" (Tele-MANAS is real);
  - the real tech stack instead of "MongoDB".
- **How to send audio:** one file per section (`S1_B` , `S2_A` , … `S8_B`) or one long file. Send it and I'll merge it into the video.
