Student Setu: introduction and conclusion script

2 speakers · camera ON · total about 1 minute 25 seconds

Phase	What	Time
1	Introduction (camera)	~47 sec
2	Website demo (voiceover video, done)	3:13
3	Conclusion (camera)	~38 sec
	Full video	**≈ 4 min 38 sec** (under the 5-minute limit)

A = you · **B** = your friend · Replace ‹ › with your real details.

PHASE 1: Introduction (about 47 seconds)

A (0:00–0:08) 👋 *smile, both visible*

> "Hello judges! I'm **‹Your Name›**, and this is my teammate **‹Friend's Name›**. We are team **‹Team Name›** from **‹College›, ‹State›**."

B (0:08–0:25) 📉 *serious tone*

> "Here's a problem we see every day. The India Skills Report 2025 says almost **half of Indian graduates are not job-ready**. Only about **4%** of young Indians have formal vocational training. And with nearly **27 students per teacher**, teachers can't see who is falling behind."

A (0:25–0:42) 💡 *energetic*

> "Our syllabus never tells us what jobs really need. So we built **Student Setu**, one platform with three pillars: **Skill Bridge** for students, **Teacher Copilot** for teachers, and **Bharat-first access**, in Hindi, even on slow internet."

B (0:42–0:47) 👉 *point towards the screen*

> "And it's live right now. Let us show you!"

(Cut to the demo video)

PHASE 3: Conclusion (about 38 seconds)

B (0:00–0:13) 🌏

> "Student Setu can reach **4.3 crore students** and **16 lakh teachers** in Indian higher education. Students find their skill gap from semester one, and teachers teach with real data."

A (0:13–0:27) 🚀

> "It's already a **working, live prototype**. It runs in any phone browser, needs no app, and costs almost nothing to run. Next, we want to pilot it with **government and local colleges**."

Both (0:27–0:38) 🙏 *look at the camera together*

> **A:** "Student Setu." **B:** "Bridging Students, Building Futures." **Both:** "Thank you!"

On-screen text for the last 5 seconds: `studentsetuconnect.netlify.app`

Recording tips

- **Framing:** sit side by side, both clearly in frame, camera at eye level. A phone camera on a stand works best.
- **Light:** face a window or lamp. Never sit with the light behind you.
- **Sound:** quiet room with the fan/AC off, phone about an arm's length away.
- **Same setup:** record Phase 1 and Phase 3 in the same place, so they match.
- **Takes:** record 2–3 takes of each phase and keep the best one.
- **Pace:** speak slowly and clearly, and pause for half a second between speakers.
- **Talk to the camera,** not to the script. Keep the script just below the camera.

Next step

Send me the **two camera videos** (introduction and conclusion). I'll join them with the demo video (Phase 2) into **one final video**, with fades between parts and the website link on screen at the end.
